

Effective from **October 2020 trimester and onwards**

FYP1 CLOs

CLO 1 – Identify a topical or problem area of interest for an ICT final year project (FYP) together with its project plan, scope and objectives.

CLO 2 – Write formal documentations, such as proposal, literature search summary, work log and report, required for the FYP.

CLO 3 – Determine suitable methods and tools for problem analysis and project development.

CLO 4 – Demonstrate formal presentation skills for a proposal and technical work.

CLO 5 – Produce strengthened and convincing proposal.

FYP1 Grading Rubrics

Elements/Features/Categories	Grade A (75-100)	Grade B (60-74)	Grade C (50-59)	Grade F (<50)
Report	Well written project proposal, with clear problem statement, objectives, and project formulation;	Average quality of project proposal;	Poorly written project proposal;	The project is considered unacceptable on the grounds that: No submission of project proposal; OR
Oral Presentation	Good oral presentation and demonstration of preliminary work/result;	Average oral presentation and demonstration of preliminary work/result;	Poor oral presentation and demonstration of preliminary work/result;	The student did not attend oral examination (2nd

				chance should be offered); OR
Objectives Achievement & Preliminary Work/ Result	Achieved at least 40% of work done toward the completion of FYP 2; or the work done involved a high level of effort and difficulty;	Achieved at least 30% of work done toward the completion of FYP 2; or the work done involved a moderate level of effort and difficulty;	Able to show minimum preliminary work;	Did not produce any preliminary work; OR
Originality of Idea/Work	Substantial evidence of original thought by student;	No evidence of original thought by student;	No evidence of original thought by student;	Blatant plagiarism ; OR
Design & Implementation	Proper development tools (Development-based project) or research methodology (Research-based project) are defined and clearly discussed to achieve goals of the project;	Development tools (Development-based project) or research methods (Research-based project) are defined and discussed to achieve goals of the project;	Unsuitable development tools (Development-based project) or research methods (Research-based project) are used that are not able to achieve goals of the project;	No design and implementation; OR
Project Plan	Development-based project work is backed by high standard of design and planning; or Research-based project work is backed by high standard of	Development-based project work is backed by average standard of design and planning; or Research-based project work is backed by average standard of	Development-based project work is backed by poor standard of design and planning; or Research-based project work is backed by poor standard of	No project plan; OR

	theoretical/analytical/design work;	theoretical/analytical/design work;	theoretical/analytical/design work;	
Literature Review	A comprehensive literature review covering a large number of competing/relevant applications/software (Development-based project); or a large number of related works/research papers (Research-based project) which are closely relevant, reliable and based on reputable sources.	Sufficient literature review with mostly relevant and reliable sources.	Poor literature review of very few relevant sources.	No literature reviews.

FYP2 CLOs

CLO 1 – Review the problem statement, objectives, project scope, literature and technical review, project methodology, project plan and system design proposed in Project I.

CLO 2 – Develop a system or theorem based on a formulated project requirement or model.

CLO 3 – Evaluate the system (for development-based project) or prove the theorem (for research-based project).

CLO 4 – Complete a formal report for the project outcomes.

CLO 5 – Present the project results.

FYP2 Grading Rubrics

Elements/Features/Categories	Grade A (75-100)	Grade B (60-74)	Grade C (50-59)	Grade F (<50)
Report	Well written project report, with clear problem statement, objectives, and project formulation;	Average quality of project report;	Poorly written project report;	The project is considered unacceptable on the grounds that: No submission of project report; OR
Oral Presentation	Good oral presentation and demonstration of fully functional prototype/result;	Average oral presentation and demonstration of prototype/result;	Poor oral presentation and demonstration of prototype/result but efforts are shown;	The student did not attend oral examination (2nd

				chance should be offered); OR
Objectives Achievement	All aims of the projects are challenging and have been fulfilled;	The project aims are average in difficulty and moderate results have been achieved;	The project aims are below-average in difficulty and minor results have been achieved;	Did not produce any work/result; OR
Originality of Idea/Work	Substantial evidence of original thought by student;	No evidence of original thought by student;	No evidence of original thought by student;	Blatant plagiarism ; OR
Software Development-based Project: Verification & Validation; Hardware Development-based Project: Implementation & Prototyping; Research-based Project: Benchmark or Comparison with Other Methods	Conceptual model been correctly translated into program with extensive verification & validation process (Software Development-based Project); prototype developed has a substantial degree of robustness and difficulty (Hardware Development-based Project); or program with extensive comparison of performance/result with other methods (Research-based Project);	Conceptual model been translated into program with some verification & validation process (Software Development-based Project); prototype developed has a low degree of robustness and moderate level of difficulty (Hardware Development-based Project); or program with some comparison of performance/result with other methods; (Research-based Project);	Conceptual model been poorly translated into program with minor verification & validation process (Software Development-based Project); Prototype developed has low level of difficulty (Hardware Development-based Project); or program without comparison of performance/result with other methods	No model, prototype or benchmarking at all ; OR

			(Research-based Project);	
Project Plan	Development-based project work is backed by high standard of design, and planning; or Research-based project work is backed by high standard of theoretical/analytical/design work;	Development-based project work is backed by average standard of design, and planning; or Research-based project work is backed by average standard of theoretical/analytical/design work;	Development-based project work is backed by poor standard of design, and planning; or Research-based Project work is backed by poor standard of theoretical/analytical/design work;	No planning; OR
Literature Review	A comprehensive literature review covering a large number of competing/relevant applications/software (Development-based project); or related works/research papers (Research-based project) which are closely relevant, reliable and based on reputable sources;	Sufficient literature review with mostly relevant and reliable sources;	Poor/Limited literature review of very few relevant sources;	No literature review; OR
Development-based Project: Potential in Commercialization / Competition Research-based Project: Potential in Publication / Competition	Development-based project work is worthy to participate in competition, or good for commercialization; or Research-based project work is worthy to be published in	Development-based project work is worthy but not ready to participate in competition, or good for commercialization; or Research-based project	Development-based project work is not worthy to participate in competition, or good for commercialization; or Research-based project	Work is grossly erroneous or trivial and displays no technical ability or potential.

	conference/journal, or participate in a competition, or demonstrates solid groundwork, experiments or analysis that can potentially be extended to postgraduate-level research.	work is worthy but not ready to be published in conference/journal, or participate in a competition, or demonstrates solid groundwork, experiments or analysis that can potentially be extended to postgraduate-level research.	work is not worthy to be published in conference/journal, or participate in a competition, or demonstrates solid groundwork, experiments or analysis that can potentially be extended to postgraduate-level research.
